What’s New?
The site work phase is finishing up at the University Houses Site. New asphalt and curb and gutters have been poured throughout the site and give the exterior a fresh new look. Additionally, hanger rough ins have been completed in Zone 2. Progress is evident in Basements 5 and 10 from the installation of new boilers and mechanical equipment.

The Past Two Weeks
• Convector rough ins in Zone 1
• Finished waste pipe installation in Zone 1
• Electrical rough ins in Zone 1
• Form and pour sidewalks

Coming Up in the Next Two Weeks
• Continue wall framing
• Continue wall blocking
• Removing thresholds and installing tubs
• Rough in HUB Buildings

Did you know? Steel studs can be used as structural or non-structural material and can be used on interior or exterior walls. In houses, steel studs are usually spaced 16 inches apart, while in an office building steel studs are spaced 24 inches apart. These distances are based on the design and loading requirements of each building.
